INFORMATION SCIENCES

Volume 4 1972

An International Journal

Contents:

EDWARD THORP (Irvine, California) AND WILLIAM E. WALDEN (Pullman, Washington)
A Computer Assisted Study of Go on $M \times N$ Boards 1

PER HAGANDER (Lund, Sweden)
Numerical Solution of $A^T S + SA + Q = 0$ 35

HAROLD R. DESSAU (East Hartford, Connecticut)
Dynamic Linearization and Nonlinear Filtering with Application to a Tracking Problem 51

FRANCO P. PREPARATA AND SYLVIAN R. RAY (Urbana, Illinois)
An Approach to Artificial Nonsymbolic Cognition 65

MASAHARU MIZUMOTO, JUNICHI TOYODA, AND KOHKICHI TANAKA (Osaka, Japan)
General Formulation of Formal Grammars 87

WILLIAM JOHN SACCO (Aberdeen, Maryland)
On Mixture Distributions in Pattern Recognition 101

S. LAKSHMIVARAHAN AND M. A. L. THATHACHAR (Bangalore, India)
Optimal Non-linear Reinforcement Schemes for Stochastic Automata . . 121

JOHN M. FITTS (Culver City, California)
On the Observability of Non-linear Systems with Applications to Non-linear Regression Analysis 129

JOHN C. HOLLADAY (Irvine, California)
A Two-Person Bidding Game with Non-Returnable Open and Sealed Bids . 157

SANDRA E. HUTCHINS (Lafayette, Indiana)
Moments of String and Derivation Lengths of Stochastic Context-free Grammars 179

G. R. V. KUMAR AND A. P. SAGE (Dallas, Texas)
The Innovations Approach to Space-Time Filtering and Smoothing . . . 193

CONTENTS

C. L. CHANG (Bethesda, Maryland)
Theorem Proving with Variable-Constrained Resolution 217

T. L. HENDERSON AND D. G. LAINIOTIS (Austin, Texas)
Digital Matched Filters for Detecting Gaussian Signals in Gaussian Noise . 233

RICHARD C. T. LEE (Bethesda, Maryland)
An Algorithm to Generate Prime Implicants and Its Application to the Selection Problem 251

J. M. MENDEL (Huntington Beach, California)
Identification of Decomposable Time-Varying Parameters by Means of Gradient Algorithms 261

W. L. MIRANKER (Yorktown Heights, New York) AND M. GOLDBERG (Tel Aviv, Israel)
A Note Comparing the Root Condition and the Resolvent Condition . . . 285

Erratum: S. Cambanis and E. Masry, *Information Sciences* 3, 277–290 (1971) . . 289

M. D. MESAROVIC AND Y. TAKAHARA (Cleveland, Ohio)
On a Qualitative Theory of Satisfactory Control 291

S. K. PARK AND D. G. LAINIOTIS (Austin, Texas)
Joint Detection—Estimation of Gaussian Signals in White Gaussian Noise . 315

GIORGIO LEVI AND FRANCO SIROVICH (Pisa, Italy)
Structural Descriptions of Fingerprint Images 327

C. K. WONG AND P. C. YUE (Yorktown Heights, New York)
Reconstruction of Patterns by Block-Projection 357

BENNET P. LIENTZ (Los Angeles, California)
On Time Dependent Fuzzy Sets 367

Author and Title Index to Volume 4 377

Author Index

Chang, C. L.
(Theorem Proving with Variable-Constrained Resolution), 217

Dessau, H. R.
(Dynamic Linearization and Nonlinear Filtering with Application to a Tracking Problem), 51

Fitts, J. M.
(On the Observability of Non-Linear Systems with Applications to Non-linear Regression Analysis), 129

Title Index

$A^T S + SA + Q = 0$,
numerical solution of
(Hagander), 35–50
Algorithm,
Gradient (Mendel), 261–284
to generate prime implicants (Lee), 251–260
Artificial Nonsymbolic Cognition
(Preparata and Ray), 65–86

Bidding Game
(Holladay), 157–178
Block-Projection
(Wong and Yue), 357–366

Computer Assisted Study
(Thorp and Walden), 1–34

Derivation Lengths
(Hutchins), 179–191
Digital Matched Filters
(Henderson and Lainiotis), 233–250
Dynamic Linearization
(Dessau), 51–64

Filtering,
Space-Time (Kumar and Sage), 193–216
Filters,
Digital Matched (Henderson and Lainiotis), 233–250
Fingerprint Images
(Levi and Sirovich), 327–356
Formal Grammars
(Mizumoto, Toyoda, Tanaka), 87–100
Fuzzy Sets,
Time Dependent (Lientz), 367–376

Games,
bidding (Holladay), 157–178
Go (Thorp and Walden), 1–34

Gaussian Noise
(Henderson and Lainiotis), 233–250
White (Park and Lainiotis), 315–326
Gaussian Signals,
(Henderson and Lainiotis), 233–250
Estimation of (Park and Lainiotis), 315–326
Go (game of)
(Thorp and Walden), 1–34
Gradient Algorithms
(Mendel), 261–285
Grammars,
Formal (Mizumoto et al.), 87–100
Stochastic Context-free (Hutchins), 179–191

Innovations Approach
(Kumar and Sage), 193–216

Joint Detection
(Park and Lainiotis), 315–326

Mixture Distributions
(Sacco), 101–120
Moments of String
(Hutchins), 179–191

Nonlinear
Filtering (Dessau), 51–64
Regression Analysis (Fitts), 129–156
Reinforcement Schemes (Lakshmivarahan and Thathacher), 121–128
Systems (Fitts), 129–156

Pattern Recognition
(Sacco), 101–120
Patterns,
Reconstruction of (Wong and Yue), 357–366
Prime Implicants
(Lee), 251–260

Qualitative Theory
(Mesarovic and Takahara), 291–314

Reconstruction of Patterns
(Wong and Yue), 357–366
Reinforcement Schemes,
Optimal Nonlinear (Lakshmivarahan and Thathachar), 121–128
Resolution,
Variable-Constrained (Chang), 217–232
Resolvent Condition
(Miranker and Goldberg), 285–288
Root Condition
(Miranker and Goldberg), 285–288

Satisfactory Control,
Qualitative Theory of (Mesarovic and Takahara), 291–314
Sealed Bids,
in bidding game (Holladay), 157–179
Selection Problem
(Lee), 251–260
Smoothing
(Kumar and Sage), 193–216
Space-Time Filtering
(Kumar and Sage), 193–216
Stochastic Automata
Lakshmivarahan and Thathachar), 121–128
Stochastic Context-free Grammars
(Hutchins), 179–191
Structural Descriptions
(Levi and Sirovich), 327–356

Theorem Proving
(Chang), 217–232
Time-Varying Parameters,
Decomposable (Mendel), 261–284
Tracking Problem
(Dessau), 51–64

Variable-Constrained Resolution
(Chang), 217–232
